Cleaner production - investment in the future

KAZENERGOMASHECOLOGY

www.kaz-eme.kz

Founder in

2003 (part of CONSORTIUM ENERGOMASHECOLOGY)

- Design and engineering center
- Production

Structure

- Montage

We built plants for

- particle separation from air and / or flue gases
- semi-dry chemisorption of crude gases such as HF, HCl, SO_x
- SO₂ - removal with wet scrubber

Developed equipment

- ESP
- Fabric (bag) filter
- Reactor for semi-dry chemisorption of crude gases
- “Wet” scrubber
- Other

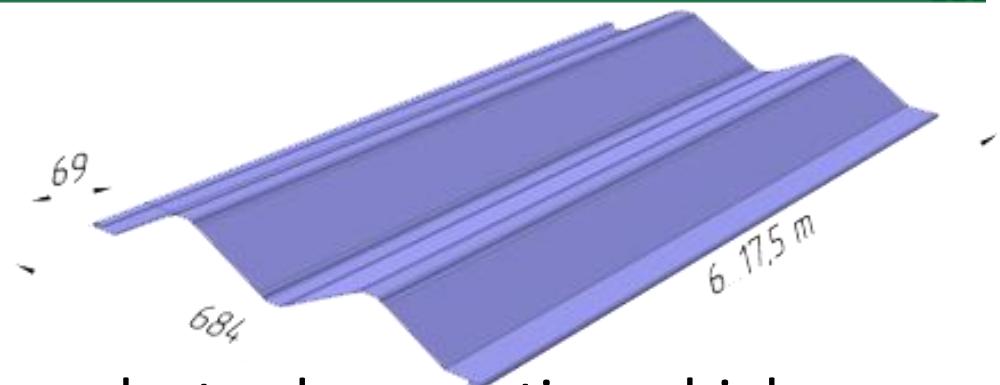

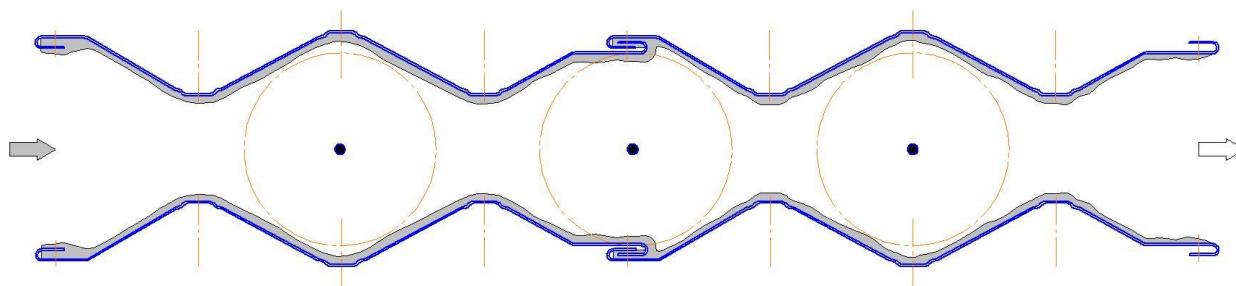

Partners

- STEULER-KCH GmbH (Germany)
- LUEHR FILTER GmbH & Co. KG

Our core activity is the forward-looking and innovative development of our products and procedures for the separation of particulate and gaseous substances from the air and/or process gas.

Our plants give the following benefits:

Reliable observance of required emission levels

There are special forms of precipitation and corona electrodes, creating a high-performance electric field

Reliable equipment and components

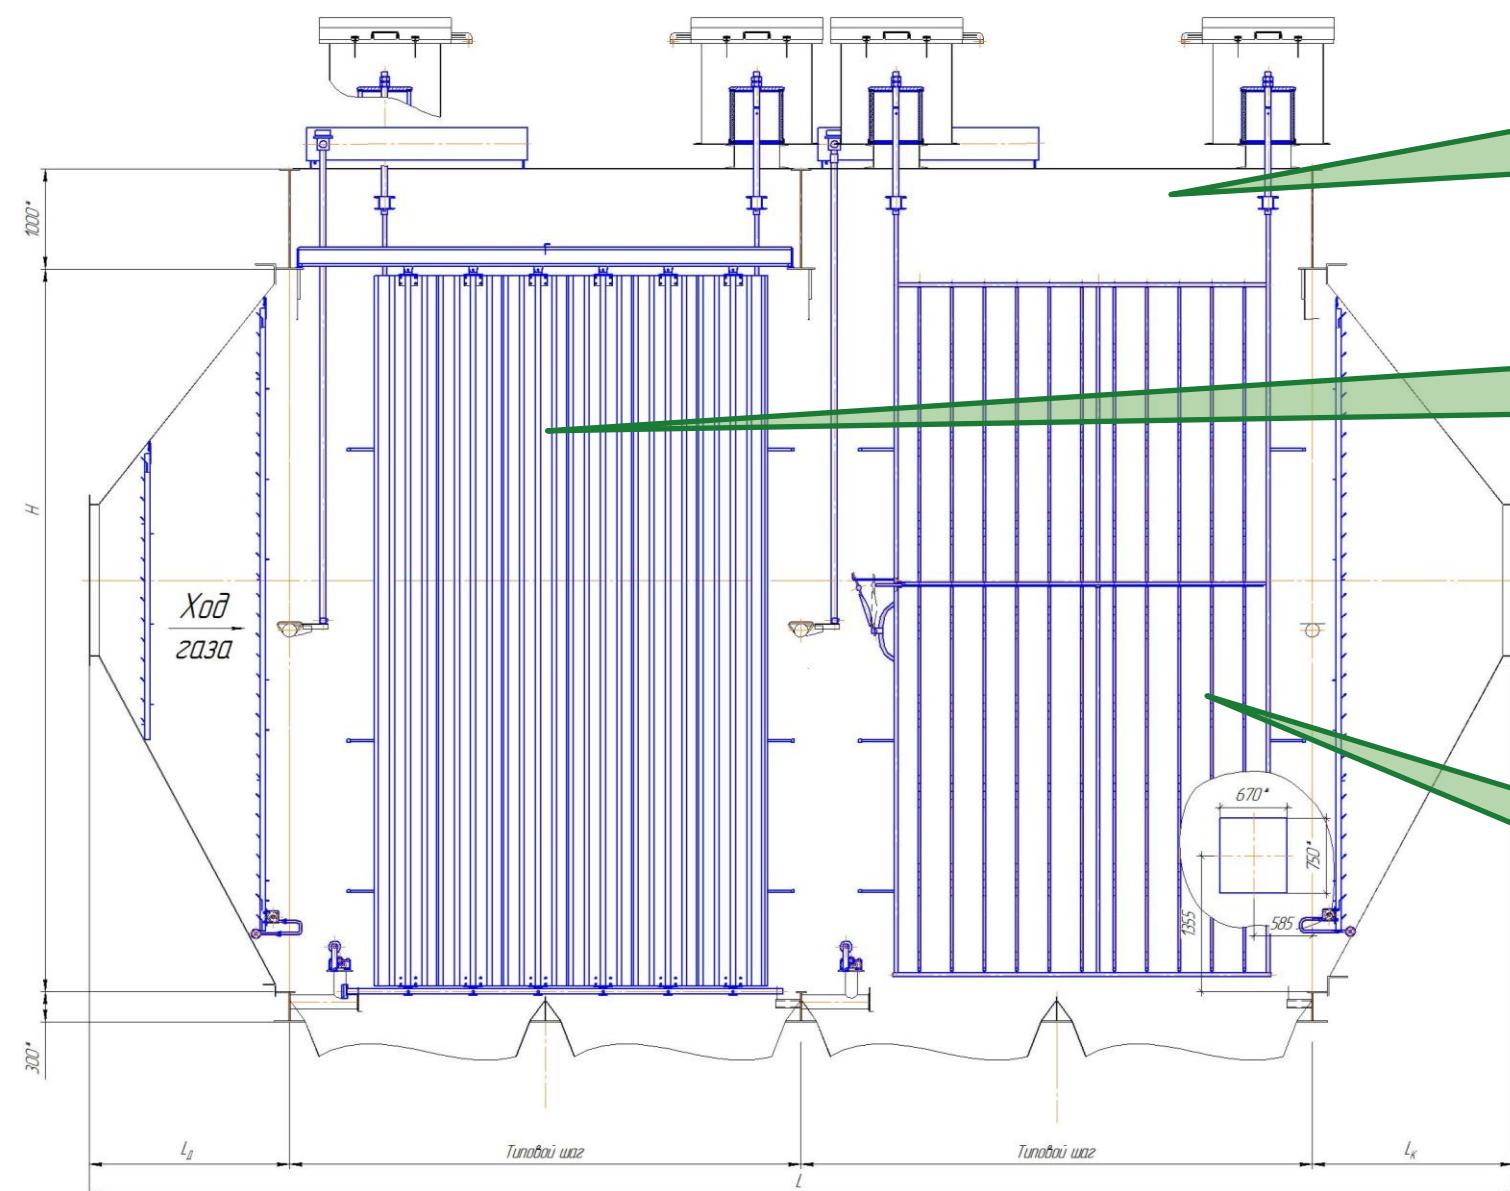

Very long bag life

Low maintenance

Electrostatic precipitator

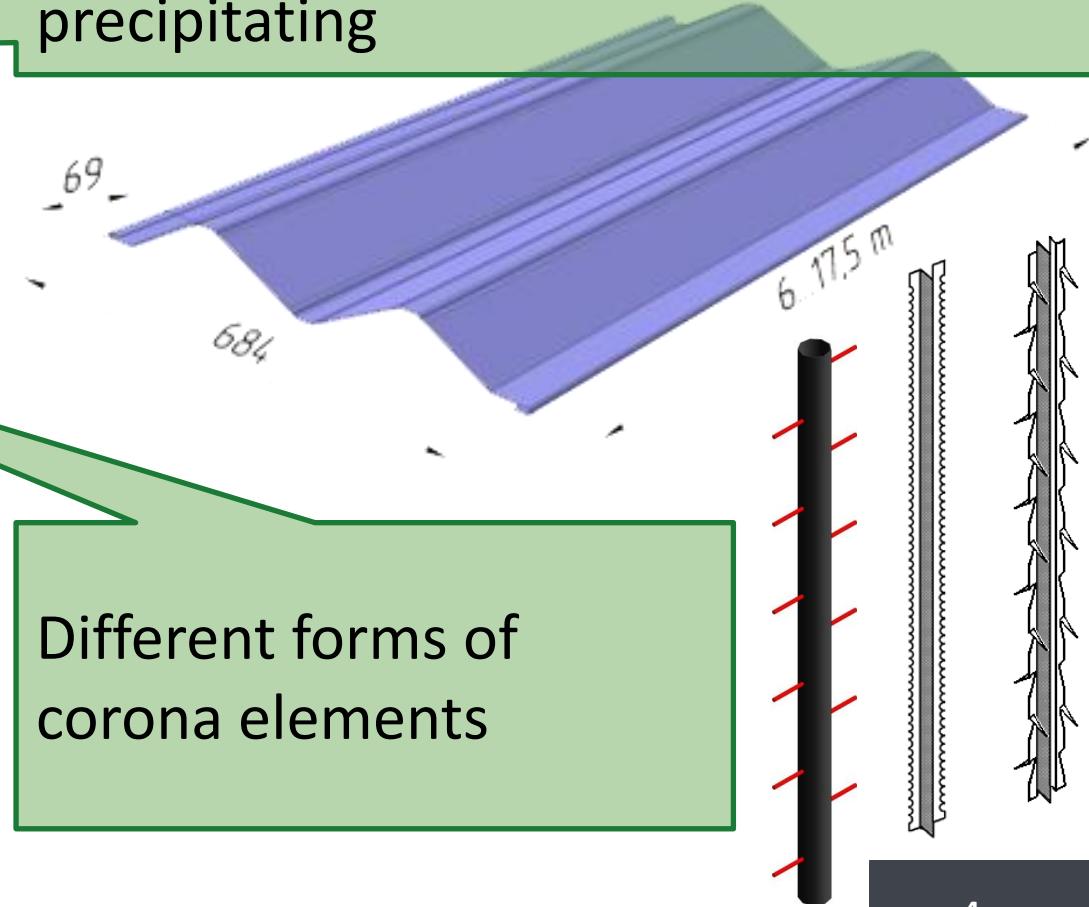

High capture efficiency

Maximum use of the internal volume of the case

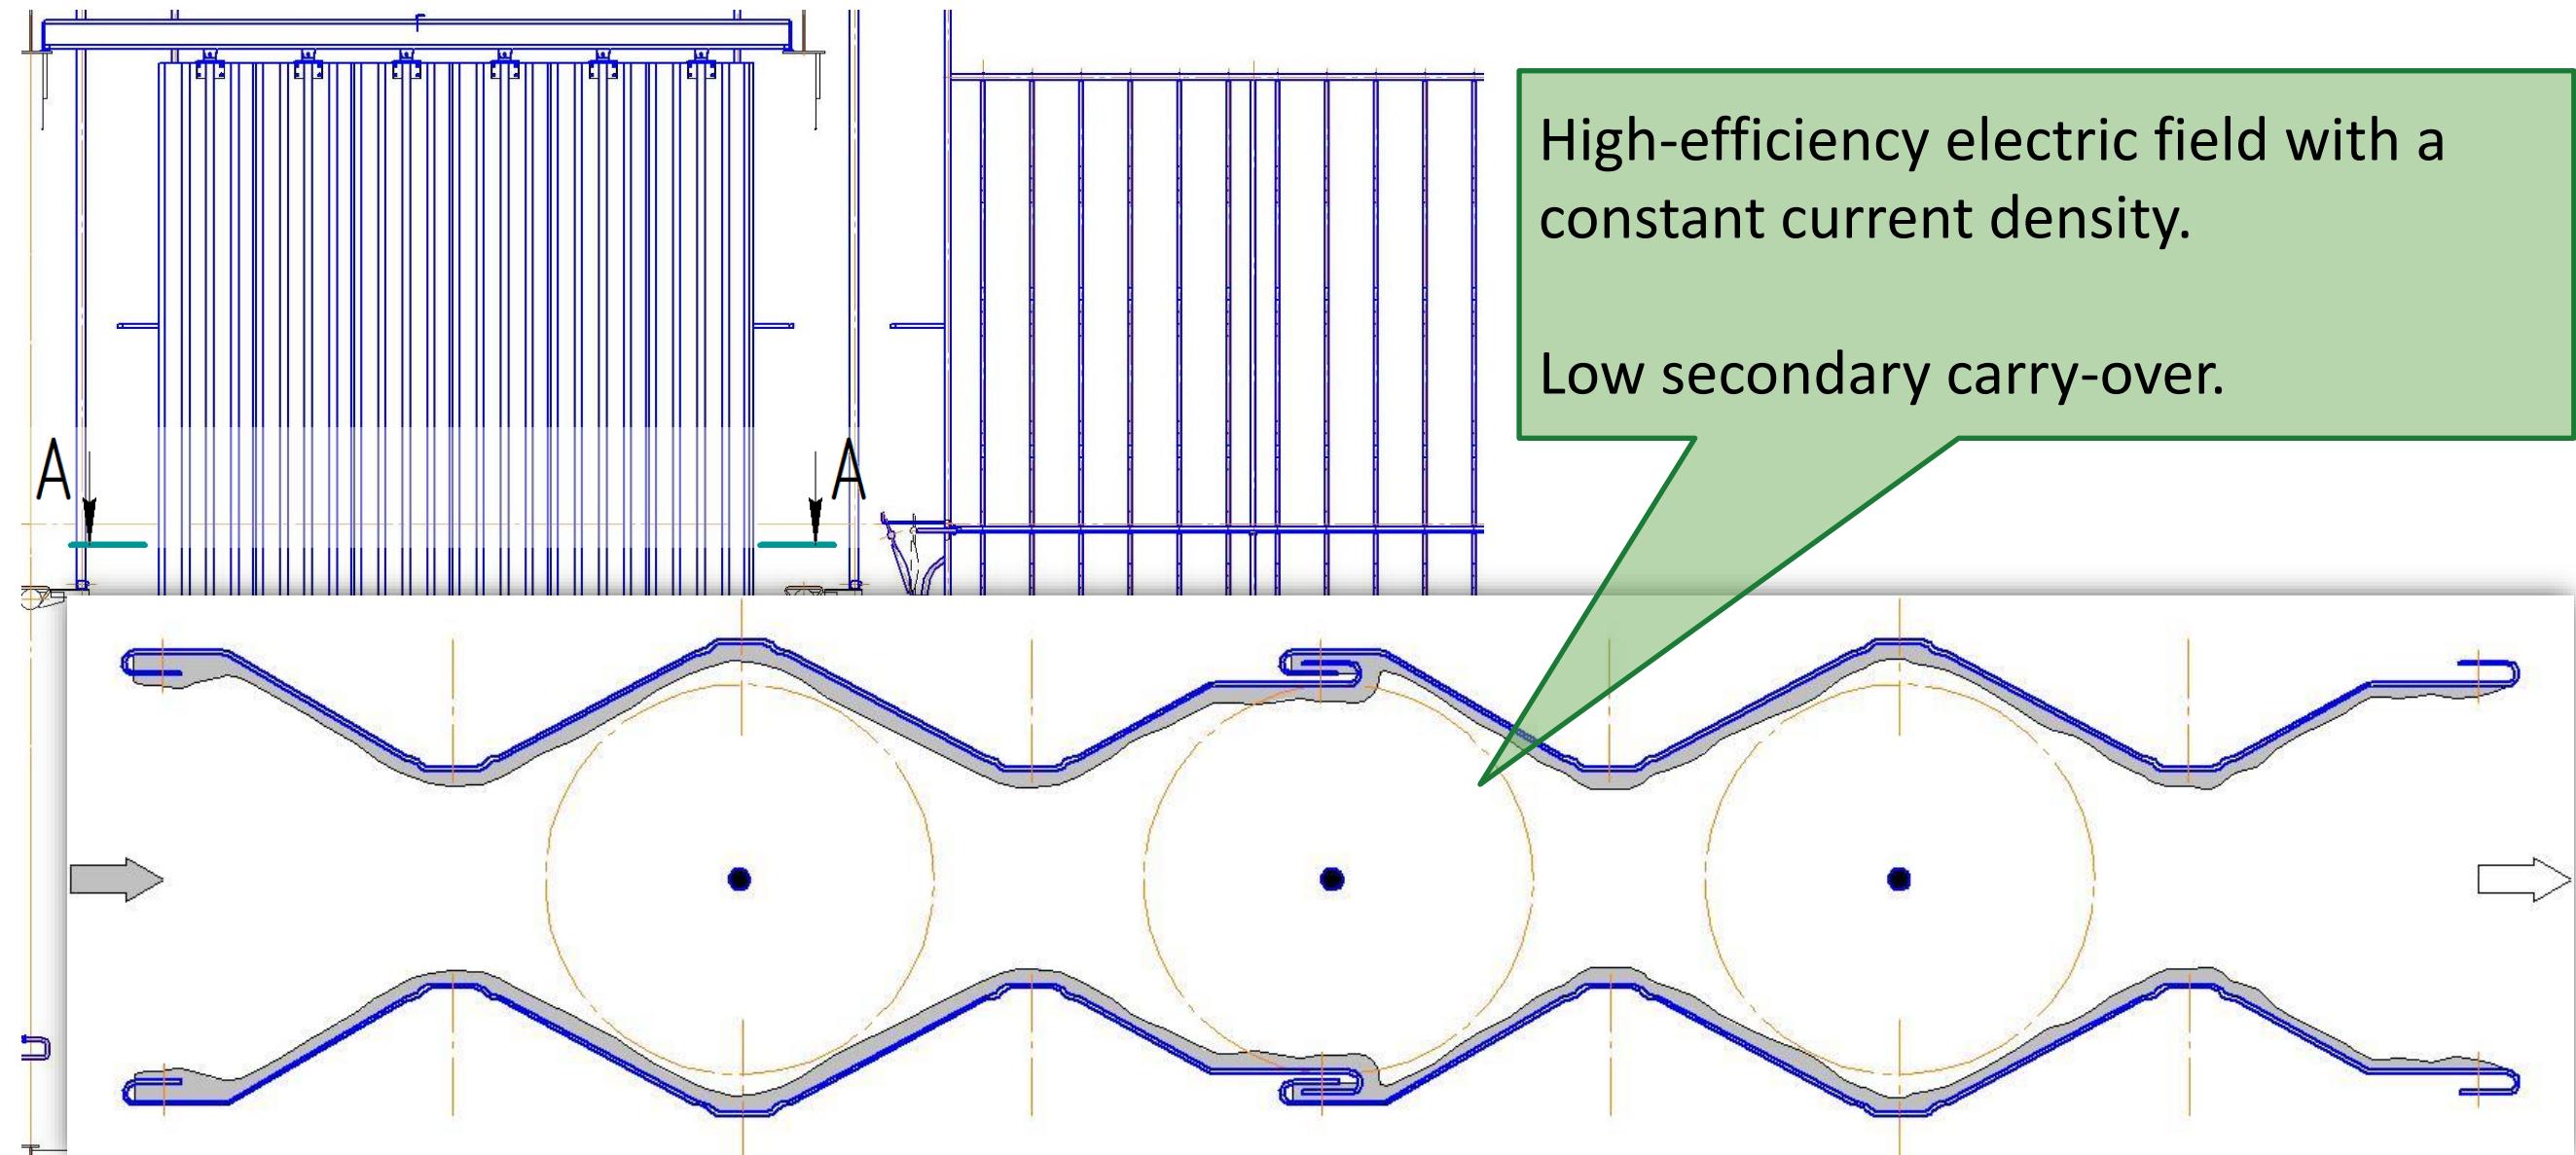

The special form of the element of precipitating

Different forms of corona elements

Electrostatic precipitator

High capture efficiency

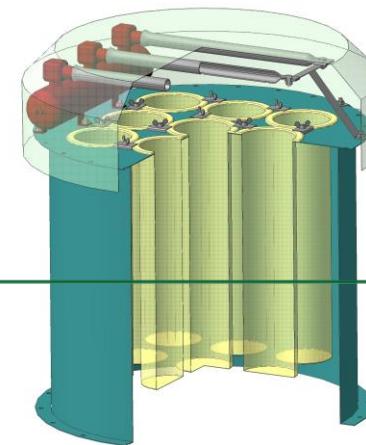

Bag filter

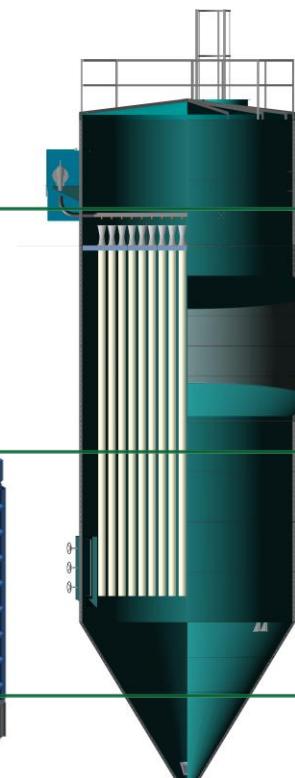

Cleaning of gases: no more than 20 mg/m³ (on request no more than 1 mg/m³).

Our specialists have developed 4 groups of standard sizes of filters:

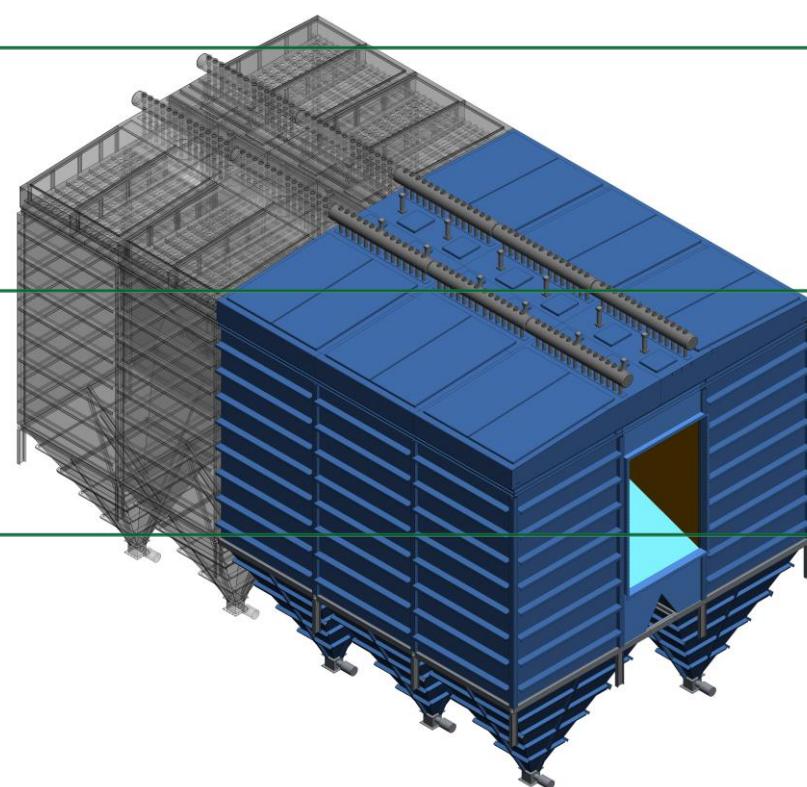

- Local (silo filter and product overflow places)

- Hose filters with tangential inlet

- Bag filter (module)

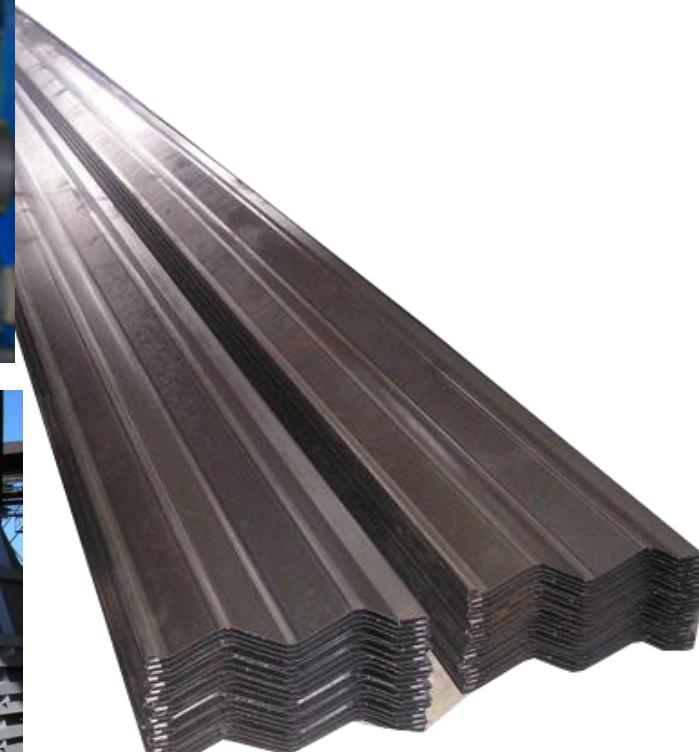

- Bag filter (high productivity)

PRODUCTION

www.kaz-eme.kz

Our main plant is situated in Zaporozhye, Ukraine.

DESULFURIZATION FLUE GASES

www.kaz-eme.kz

We offer installation of wet scrubber with our partners STEULER-KCH GmbH (Germany)

DESULFURIZATION FLUE GASES

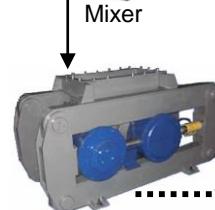

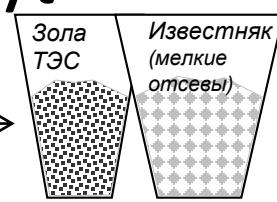

Typical sorbent ($\text{Ca}(\text{OH})_2$) preparation process

Commodity CaCO_3 – 15-25 \$/t
(fraction 40-120 mm)

CaO – 120-150 \$/t

Sorbent preparation process – DALSIKA

screening CaCO_3 – 3-5 \$/t
(fraction 0-20 mm)

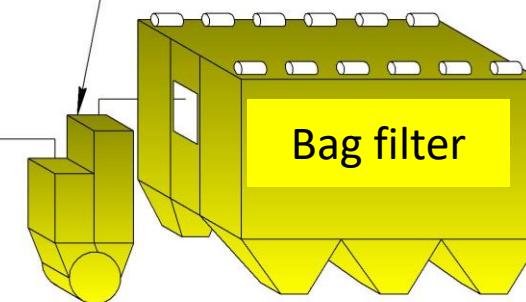

The gas generator and furnace in one unit

$\text{Ca}(\text{OH})_2$

Reactor

Bag filter

Sorbent DALSIKA

We offer the installation of a semi-dry gas desulfurization system with our DALSIKA sorbent production system.

DALSICA give the following benefits:

- Improving the efficiency of desulphurization systems
- Low operating costs for gas cleaning
- ROI – 2-3 years
- Disposal (sale) wastes
- and other

DALSICA – method for obtaining cheap sorbent
